

A compact sign, carried flat.

Recommended configuration: rigid 18 × 24-inch panels + folding A-frame + cargo trailer.

PRINT SPECIFICATION

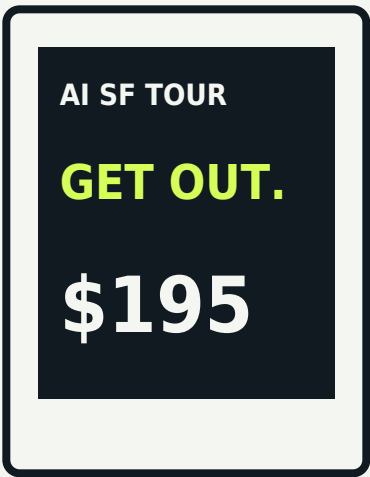

Print two copies of the supplied single-face PDF at **100% scale**, trimmed to **18 × 24 inches**. Use matte, weather-resistant rigid panels compatible with the frame (target 4 mm corrugated plastic, subject to the frame supplier). The design is vector artwork with embedded type and a vector QR code.

Palette: ink #101a20, acid lime #d5ff58, cool white #f4f6f2. Square pixels and a stepped arrow echo the website; keep the QR quiet zone clear. Ask the printer for a physical color proof; the bright lime will vary by printer and material. Artwork is at finished size with generous safe margins. Have the printer add the bleed their process requires; do not enlarge and crop the copy.

FOLDING STAND / PROCUREMENT TARGET

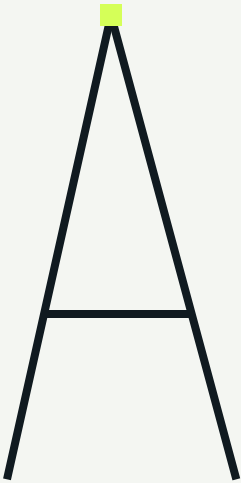

Choose a compact molded-plastic outdoor A-frame for two 18 × 24-inch inserts, with a carry handle and secure panel retainers. **Plasticade Signicade MDX** is a candidate: its manufacturer flyer specifies two 18 × 24-inch signs and internal sand weighting up to 4 lb. Request current dimensions, dry weight, panel thickness, ballast and wind guidance before ordering. No frame has been purchased or physically tested.

Packed-fit target: no more than roughly **31.5 × 20 × 4 inches**, including the sleeve and straps. This is a design target, not a verified MDX folded specification. Do not assume a fit from the nominal panel size.

FRONT

18 × 24 in insert

SIDE / FOLDS CLOSED

Use the supplied spread limiter.

Illustrations are conceptual, not fabrication drawings. Buy a rated frame; do not improvise hinge or ballast engineering from this sketch.

Bike transport + setup.

A two-wheel cargo trailer keeps the panels low and leaves your hands free.

TRAILER FIT

A **Burley Flatbed** is a reference candidate. Burley currently lists a 32.5 × 20.5-inch interior footprint, 100 lb cargo capacity and 15.1 lb trailer weight. The 20.5-inch width leaves very little margin for a 20-inch packed stand: measure the actual packed frame and obtain a physical fit check before buying. Verify bicycle, axle and hitch compatibility with the maker.

Burley lists \$319.95 before tax or shipping; the budget uses a separate **\$350 planning allowance**. This published retail reference is not a quote or confirmation of availability. The full sign kit allowance is \$750: panels \$120, frame \$180, trailer \$350, sleeve/straps \$60 and ballast bags \$40.

PACK → RIDE → DEPLOY

1. Pack low. Remove or protect panels; close the stand and secure it in a padded sleeve. Lay the load flat, centered over the trailer deck. Secure in two directions with independent straps to approved anchor points; contain every loose strap end.

2. Check the bicycle. Keep the hitch articulation, wheels, reflectors, lights and safety flag clear. Confirm tire clearance and load limits. Test steering and braking in a quiet area, then recheck the straps. Do not ride with a sail-like panel upright or attached to your body.

3. Set up only at the agreed site. Open the frame fully, engage its limiter and secure both panels. Use only manufacturer-approved ballast and instructions. Keep the stand attended and away from doors, curb ramps, queues and the pedestrian path.

4. Reassess the wind. A small sign can still overturn. No safe wind threshold was verified for this configuration. Close and remove it when gusts move it; do not tie it to trees, utility poles or street furniture.

5. Resolve tour-time storage. The guide rides Muni with guests. Arrange secure bike/trailer/sign storage before the group departs, or book someone to retrieve it. The budget currently assumes free storage; change that cost if needed.

OPERATING HOURS + RETURN

Tours run Tuesday–Sunday: Branch A, 8:30 AM–12 PM; Branch B, 2–5:30 PM. The optional +\$40/person guided Muni return is additional time: allow 45 minutes provisionally. Rehearse whether the morning return, lunch and setup fit before 2 PM. Afternoon return may extend work to around 6:15 PM. The 45 minutes is a budget allowance, not a measured route time.

Release checklist.

Operator decisions still needed before printing, public setup or taking bookings.

CONFIRM THE PLACE AND PERMISSIONS

The exact meeting point is unresolved. Agree an address, landmark, waiting area, check-in routine and accessible approach. Identify the landowner and public agency responsible for that precise spot. Fisherman's Wharf can involve different jurisdictions; this brief does not establish permission to place a sign or operate a tour there.

San Francisco Public Works' A-frame order ties placement to a business frontage and sets clearance and location restrictions. An independent tour guide cannot assume any open sidewalk is eligible. Review the current order and confirm its application with the responsible authority or property owner; an A-frame design is not a permit.

CONFIRM THE PRODUCT

Complete a timed rehearsal with the intended group size. Confirm boarding and transfer logistics, street crossings, restrooms, accessibility, stop access and the guide's return to the starting area. No private-company entry, special access or company partnership should be implied without explicit written arrangements.

Obtain tour-specific insurance terms and quotes; confirm business registration, any applicable permits, consumer terms, cancellation/weather policy and procedures for guests aged 16–17. Replace the budget's cost placeholders. The model is an economic plan, not a legal or insurance determination.

VERIFY THE PRINT + WEB DESTINATION

The QR encodes <https://aisftour.com>. Domain ownership, DNS, page availability, final booking terms and a live payment flow were not verified in this design brief. Test the QR on actual printed stock with multiple phones, then verify the correct site and meeting instructions. Remove the small DESIGN PROOF line only after the operator approves the final launch copy.
