

BUILDERS. BALLERS. & THE BAY.

GUIDE TRAINING + BUSINESS PLAN

We teach you how to enjoy the city
the way the locals do.

A

Old soul. New intelligence.

B

Builders. Ballers. & the Bay.

C

When the fog takes a day off.

02

The offer and ticket costs

Prices are USD per guest. A and B are separate purchases; this is the working launch offer.

Product	Guest price	Operating promise
Branch A	\$195	8:30 AM-12:00 PM. Old city, transit and AI.
Branch B	\$195	2:00-5:30 PM. Dogpatch, builders and the waterfront.
Branch C	\$195 proposed	Separate 4.5-hour sunny-day pilot. Price, dates and duration need operator approval.
Guided Wharf return	+\$40	A/B only. Guide time after the tour; around 45 extra minutes. Transit fare is separate.
Muni-only day pass	\$5.70	Purchased by the guest when needed. Buses, historic streetcars and light rail. [1]
Muni single ride	\$2.85 digital/card \$3 cash	120 minutes including transfers; select an appropriate fare for the whole outing. [2]
Muni, ages 16-18	\$0	Regular Muni is free for ages 18 and under; the \$195 tour ticket still applies. [3]
Japanese Tea Garden	Live rate at booking	Paid separately. Carry a \$25 planning allowance per paying visitor; this is not a verified ticket quote. [4]

Adult examples: A or B plus a \$5.70 pass = **\$200.70**. With the optional guided return = **\$240.70**.
Proposed C plus the pass and \$25 garden allowance = **\$225.70**, subject to actual garden pricing.

Included: guiding, neighborhood interpretation and practical Muni instruction. **Separate:** transit fares, coffee, meals, tea, shopping, garden entry, game tickets and gratuities. Coffee is extra to the examples above. Company offices, stadium interiors and Alcatraz admission are not part of these routes.

A/B operate Tuesday-Sunday; no Mondays. Ages 16+. Initial capacity: 8 guests. Confirm access needs and under-18 arrangements before sale. Branch C remains a proposal and is not currently bookable.

03

Branch A | Old soul. New intelligence.

8:30 AM-12:00 PM / 210 minutes / Fisherman's Wharf to Ferry Building area.

Time	Where / guide action
8:30-8:40	Fisherman's Wharf. Welcome, headcount and pass check. Brief Alcatraz view story when visible.
8:40-9:05	Walk to North Beach. Use the Taylor/Columbus approach to Washington Square; allow for crossings.
9:05-9:20	North Beach. Italian community, cafes and the places where people exchange ideas.
9:20-9:35	Walk to Chinatown. Continue to Stockton/Washington at the group's pace.
9:35-9:55	Chinatown-Rose Pak. Community, civic advocacy and station art. Practice choosing the train direction.
9:55-10:20	T Third southbound to Yerba Buena/Moscone. Include station entry, wait, ride and exit. [5]
10:20-10:30	Moscone area. Steve Jobs, the 2007 iPhone debut and the changing way people use computers.
10:30-10:50	Walk along Howard. Continue toward First/Howard on public sidewalks.
10:50-11:10	Anthropic corridor. Public Howard Street interpretation; verify occupancy using the dated address notes on page 17. Discuss Claude and evaluating AI answers.
11:10-11:25	Comfort break. Use a prechecked restroom; refreshments are an optional guest purchase.
11:25-11:45	Walk to the Ferry Building. Connect the city's older networks with its newer ones.
11:45-12:00	Buffer and close. Questions, onward trip planning and return-service headcount.

Time budget: 80 minutes walking + 25 transit + 75 interpretation + 15 break + 15 buffer. These are rehearsal allowances, not measured group timings. Select exact meeting, standing and restroom locations in the field.

If delayed: shorten the closing discussion; do not rush a crossing. Optional return: F streetcar toward the Wharf from the Ferry Building, then walk from Jefferson/Taylor. Allow about 25-40 minutes, subject to service. [6]

04

Branch B | Builders. Ballers. & the Bay.

2:00-5:30 PM / 210 minutes / Fisherman's Wharf to Oracle Park area.

Time	Where / guide action
2:00-2:05	Fisherman's Wharf. Welcome and start the Muni lesson; complete the fare check before boarding.
2:05-3:05	Wharf to Dogpatch. Walk to Columbus/Bay; 30 inbound to Stockton/Washington, then T Third southbound to Third/20th. Include walks, waits, station access and teaching. [5,7]
3:05-3:15	Walk to RH San Francisco. From Third/20th toward 590 20th Street. Corgi Cafe remains a neighborhood story, not a second scheduled coffee stop.
3:15-3:35	Restoration Hardware / The Palm Court. Coffee in the historic Bethlehem Steel gallery. Guest-paid; preconfirm coffee-only service, group access, timing and restrooms. [14a]
3:35-3:50	Pier 70 / Y Combinator neighborhood. A short public-street story of making, funding and testing new ideas.
3:50-4:15	Walk to Chase Center. About 15 minutes walking and 10 minutes on the Warriors, Valkyries and changing waterfront. Check home-game schedules. [15a,15b]
4:15-4:40	OpenAI exterior, 1455 3rd Street. Choose a clear public standing point. Use the script and activity on pages 18-19; campus photo references are on page 20.
4:40-5:05	Walk toward Oracle Park. Check event barriers and select the safe approach before arrival.
5:05-5:15	Oracle Park exterior. Giants, the Bay and options for the evening. Show the actual date's schedule.
5:15-5:30	Buffer and close. Preserve time for late transit, questions and onward directions.

KEEP THE PROMISES PRECISE

AI stops are exterior stories; the RH coffee visit depends on service capacity. Confirm a 20-minute coffee-only stop with RH before offering it. Do not promise seating, rooftop access, free drinks or a full meal. If unavailable, announce the replacement break before departure. [12-15]

If more than 15 minutes behind: reduce the Pier 70 loop to a short street-side story and shorten the cafe stop. Optional return: walk to a current 30 outbound stop around Townsend/Lusk or Third/Brannan, then alight near Columbus/North Point. Allow 40-55 minutes; event traffic can add time. [7]

Guests staying for a game skip the immediate return; a later escort needs separate booking and staffing.

05

Branch C | When the fog takes a day off.

Proposed pilot: 11:00 AM-3:30 PM / 270 minutes / Ocean Beach to Japantown.

A SEPARATE OUTING - ONLY ON A PERFECTLY SUNNY DAY

Ocean Beach, Outerlands coffee, the Japanese Tea Garden, Haight-Ashbury and Japantown sit outside A/B. This pilot includes a guest-paid coffee stop on sunny weekends. Confirm sun and no fog at the beach. South Bay places remain stories, never visits.

Time	Proposed west-to-east sequence
11:00-11:30	Ocean Beach, Judah/La Playa area. Meet at an agreed landward point; 20 minutes for surf culture and Muni, then allow 10 minutes walking toward 45th/Judah.
11:30-11:50	Outerlands, 4001 Judah Street. Guest-paid coffee. Current daytime brunch: Sat-Sun 9:30 AM-2 PM, walk-ins only, maximum seated party 8. Preconfirm quick service. [14b]
11:50-12:35	N Judah to the Tea Garden. Walk to Judah/46th, ride inbound to Judah/9th, then walk into the park. Includes wait, ride and approach; verify service. [8]
12:35-1:10	Japanese Tea Garden. Entry, a brief garden visit and restrooms. Admission and optional tea are extra; no sit-down tea service is promised. [4]
1:10-1:50	Walk through the park to Haight-Ashbury. Rehearse the accessible route and allow a steady pace.
1:50-2:10	Haight-Ashbury. Counterculture and creative communities; keep shop entrances clear.
2:10-3:00	To Japantown. 7 inbound toward Haight/Fillmore; transfer to 22 inbound/northbound toward Fillmore/Geary, then walk. Includes waiting and buffer. [9]
3:00-3:30	Japantown. Neighborhood orientation, questions and close. Rehearse current Peace Plaza detours (page 17). Optional food, tea or shopping after the tour.

Coffee logistics: 8 guests plus a guide exceed Outerlands' seated-party limit. Confirm takeaway service or an acceptable arrangement; do not assume seating. Skip a long queue. Announce any weekday coffee substitution before booking. Drinks are extra. [14b]

Pilot: \$195 proposed, 4-8 guests; fares and garden entry extra. Rehearse all 270 minutes and the Judah meeting point; no Wharf return. Use another guide or close conflicting A/B departures. Confirm garden and NPS authorization before sale. [10]

06

Fog: plan the season, check the beach.

A qualitative operating calendar for Ocean Beach; not measured monthly probabilities or a forecast.

MOST FOG-PRONE: LATE SPRING AND SUMMER
For planning, treat May-August as the fog-sensitive window, especially June-August. NPS identifies September and October as Ocean Beach's sunniest months. A sunny downtown forecast does not establish clear conditions at the beach. [11]

JAN Rain season	FEB Rain season	MAR Transition	APR Fog builds	MAY Fog-sensitive	JUN Fog-sensitive
JUL Fog-sensitive	AUG Fog-sensitive	SEP Best window	OCT Best window	NOV Rain season	DEC Rain season

Month labels translate NPS's broad seasonal guidance into a planning calendar. Fog and wind can occur in every month. November-March is generally the rainy season; clearer coastal months are not guarantees of safe or comfortable conditions. [11]

PROPOSED C DECISION ROUTINE

- The evening before:** review the NWS coastal forecast, alerts and expected cloud/fog timing. Flag a conditional departure and prepare the agreed guest message. Do not rely on a generic city weather icon.
- By 9:00 AM for an 11:00 AM start:** the operator makes the proposed go/no-go decision using a recent beach observation, local forecast and operational conditions. Recheck on site before guests arrive. The 9:00 AM deadline is a proposed service policy to approve before sale.
- If the sunny condition fails:** use the published cancellation policy. Recommended launch policy: offer a full refund or a guest-selected reschedule when the operator cancels before departure. Never substitute A or B without the guest's agreement.
- If fog arrives en route:** the guide can leave the shore for the agreed inland route when safe; otherwise end or reroute according to the disclosed policy. Record actual conditions and how much of the outing was delivered. Do not promise uninterrupted sunshine.

07

Teach Muni, then let guests lead.

The public promise is local know-how. This practical lesson is delivered in person.

OPENING SCRIPT

“We teach you how to enjoy the city the way the locals do. Your transit fare is separate. Let's check what you already have, choose the right option, and practice together before our first ride.”

Step	Demonstrate and check
1 / Choose	Ask about existing passes, youth eligibility and phone access. Explain that a Muni-only day pass covers regular buses, historic streetcars and light rail until 11:59 PM that day; it is not a rolling 24-hour pass. Cable cars, BART and Caltrain are separate. [1,3]
2 / Tap	For a pass on Clipper, use the same card or device at each boarding or Metro faregate. Wait for acceptance. Muni does not require tapping out. [2,16]
3 / Activate	For MuniMobile, activate the pass before boarding or entering the paid area. Show the live active ticket; it is not tapped on a Clipper reader. At stations, follow the agent's gate direction. [17]
4 / Paper	For a cash farebox day pass, tell the operator which product is wanted before inserting exact cash. Keep the paper pass for inspection and show it as directed at Metro entry. [1,16]
5 / Ride	Check route and destination; let others off. Valid-pass holders may use any door; cash purchases use the front. Keep aisles and priority seating clear, request the stop where needed and retain proof of payment. [16]
6 / Transfer	Have a guest identify the next route, direction and stop, and say whether their fare is tapped or shown. Confirm it before moving the group.

THE FINISH-LINE CHECK

Each guest should be able to explain their next boarding action, the fare's expiry and a route to the next place they want to visit. Help guests retain independent access to their tickets when the group separates.

App transition: SFMTA plans to stop MuniMobile day-pass sales January 3, 2027. Recheck current guidance before tours; single-ride app sales ended September 1, 2026. Carry instructions for a workable cash/paper or Clipper alternative. [18]

08

Tell a story the city can support.

Use a visible place, one verified fact, a human question and a connection to today.

Stop / theme	Guide prompt and factual boundary
Wharf / Alcatraz	Point toward the island when visible. The 1962 escape plot used decoy heads with human hair. Ask how an observer decides what to trust. Do not claim the escapees' ultimate fate is established. [19]
North Beach / Chinatown	Treat both as living neighborhoods. Discuss gathering places, migration and civic voice. At Rose Pak Station, connect community advocacy with practical transit access; avoid caricatures or partisan verdicts. [20]
Moscone / Steve Jobs	Apple introduced iPhone at Macworld San Francisco on January 9, 2007. Ask how interfaces change habits. South Bay homes and company campuses are stories only; no residential stop or private address is needed. [21]
Anthropic / AI judgment	Explain that Claude is an AI assistant and use a harmless example of an answer that needs checking. Company occupancy changes: recheck frontage and keep all interpretation on appropriate public space. [12]
Dogpatch / Y Combinator	Connect the district's industrial past with today's startup activity. Explain an accelerator as a program helping young companies develop, with funding and advice. YC identifies its campus at Pier 70; no access is promised. [13]
OpenAI / chips	Explain useful AI outputs and why they need checking. Use the AMD/NVIDIA script and address review on pages 26-28. Mission Rock is a proposed NVIDIA exterior stop; South Bay campuses remain stories only.
Chase / Oracle	Connect local identity and waterfront change. Show the official Warriors , Valkyries and Giants schedules for the chosen date. Check home games at Chase Center or Oracle Park. Game tickets are separate from the tour. [15,15a,15b]
Ocean Beach / west side	Wetsuits, not board shorts. Discuss surf culture from the shore. Distinguish the Tea Garden in Golden Gate Park from Japantown, a separate neighborhood. Haight-Ashbury adds the counterculture thread.

Delivery drill: give a 90-second stop talk, then answer one question in plain language. If a fact is uncertain, say so and check later. Keep the tour independent: no company sponsorship, staff meeting or special access is implied.

09

Run a calm, well-paced group.

Training is complete when the guide can lead the route and recover from a realistic disruption.

BEFORE EACH DEPARTURE

Review the guest list, ages, access needs, return buyers and current payment/booking status. Check Muni alerts, weather, stadium events, company frontages and comfort stops. Carry charged phone, power bank, route notes, first-aid supplies appropriate to your training, and the operator's contact procedure.

Arrive about 30 minutes early. Position the sign only in the agreed location. Check guests in, confirm the booked branch, explain walking/public-transit demands and identify a reunion point if separated. Confirm that every guest can use the chosen fare.

ON THE ROUTE

Headcount before boarding, after alighting and after every comfort stop. Gather on the same side of the crossing before speaking. Let a full vehicle leave rather than forcing the group aboard. If split, use the pre-agreed reunion stop and phone procedure; nobody follows a moving vehicle.

Keep the group out of business doorways and residential entrances. Ask before photographing people. Allow rest and restroom needs without shaming a guest. Use the field-tested accessible alternative when a stair, slope or broken elevator prevents the planned route.

INCIDENTS AND WEATHER

For an immediate emergency, call 911, give the exact location and follow dispatcher instructions. Keep the rest of the group in a safe place; provide only assistance within your training. At Ocean Beach, stay on the landward route and do not offer water entry, surf or swim instruction. Record incidents factually afterward.

Guide assessment	Pass evidence
Route rehearsal	Completes the route safely; records walking, waiting, breaks and buffer time.
Teaching practice	A new guest can choose, use and explain their fare, then plan one onward ride.
Disruption drill	Handles a missed vehicle, closed restroom, separated guest and failed sunny-day condition.
Story accuracy	Uses dated sources; clearly distinguishes a verified fact, personal interpretation and uncertainty.
Owner sign-off	Confirms competence in each area before solo guiding.

10

The A/B operating budget

Current workbook basis: \$195 tickets, \$40 return, guest-paid fares and one owner-guide.

Average month	Conservative	Base	High
Seat occupancy	25%	50%	75%
Paid guests	104	208	312
Tour + return sales	\$21,320	\$42,640	\$63,960
Operating surplus*	\$7,917.92	\$27,733.04	\$47,548.16

*Planning scenarios, not demand forecasts. All 52 monthly A/B departures are costed. The model uses 8 seats per departure, 2 departures/day, 6 days/week and 52/12 weeks/month. Return take-up is assumed to be 25%.

Base monthly cost	Amount	Basis
Owner tour / return / admin labor	\$10,680	267 hours at \$40/hour, above the \$19.61 SF minimum; includes 39 return hours.
Card processing	\$1,314.56	Domestic online baseline; one guest/order plus a conservative separate return transaction. [22]
Refund / incident reserve	\$1,279.20	3% of gross sales as a planning deduction.
Guest consumables	\$416.00	\$2 per guest; guest Muni fares cost the operator \$0.
Guide Muni	\$148.20	26 operating days x \$5.70.
Other overhead	\$1,069.00	Insurance, web/tools, data, bookkeeping, marketing and equipment/admin reserves.
Total modeled operating cost	\$14,906.96	Leaves \$27,733.04 before tax and unmodeled costs.

Funding: \$4,634.50 startup including 15% contingency, plus \$23,794.40 for two months of committed costs = **\$28,428.90**. Full-schedule break-even is about **63 paid guests/month** at the modeled mix. Owner labor is an economic cost even when paid as drawings.

Limits: supplier prices, insurance, permissions, tax treatment, occupancy and acquisition are unvalidated. Employee overtime and employer payroll costs, income tax, sales-tax effects, financing and OTA commissions are excluded. Branch C is excluded. Pilot before scaling to 267 owner hours/month.

11

Budget for every hour worked.

San Francisco minimum wage and the owner-guide labor allowance. Verified September 9, 2026.

SF MINIMUM WAGE: \$19.61 PER HOUR

Effective **July 1, 2026**, the general San Francisco minimum wage is **\$19.61/hour**. The workbook retains a **\$40/hour** owner-guide target, \$20.39 above that floor. Its effective budget rate is the higher of the target and the minimum wage.

Time allowance	Current budget treatment
Branch A or B	3.5 hours with guests + 0.5 hour preparation/close = 4 hours per departure.
Guided return	0.75 hour extra per departure; 39 hours/month reserved when returns are offered.
Administration	20 hours/month for bookings, marketing, customer service and maintenance.
Startup rehearsals	12 hours at the same effective hourly rate; included in startup costs.
Proposed Branch C	4.5 hours on route + 1 hour preparation/close = 5.5 hours; separate from the A/B monthly model.

The base A/B budget still allows **267 owner hours and \$10,680/month**. That is an economic allowance for owner time, not a complete employee payroll estimate. Record actual hours: required setup, training, work travel and close-out may exceed these planning allowances.

BEFORE HIRING GUIDES

Budget applicable overtime and employer payroll costs, including payroll taxes, paid leave and workers' compensation. For covered nonexempt California employees, overtime generally starts above 8 hours/day or 40 hours/week; double-time and seventh-day rules can also apply. The full owner schedule averages about 61.6 hours/week, so staffing it with one employee needs an overtime calculation.

Keep the floor current: update Assumptions C65 after checking the city's published rate, especially before each July 1. C66 applies the higher rate to A/B tour, return, admin and startup rehearsal labor. Reprice the separate C pilot when labor changes. Missing or invalid rates display an error.

Sources: [SF minimum wage history](#) | [California overtime rules](#) | [Hours worked](#).

12

Return economics and a Branch C pilot

Use small experiments before committing the full schedule or counting sunny-day revenue.

THE \$40 GUIDED RETURN

At \$40/hour, a 45-minute return costs \$30 in guide labor. Each \$40 buyer contributes about **\$37.34** after modeled card fees and the 3% reserve. One buyer covers marginal guide time. At 25% take-up, the full-schedule model leaves \$381.68/month after reserving return time for every departure.

BRANCH C - PROPOSED STANDALONE ECONOMICS

Model \$195 per guest, 4-8 guests and 4.5 hours on route plus 1 hour of preparation/close. Guests pay transit and garden admission. These are planning assumptions, not an approved public offer.

Per C departure / 4 guests	Planning amount
Gross ticket sales	4 x \$195 = \$780.00
Guide labor	5.5 hours x \$40 = \$220.00
Guide transit + garden allowance	\$5.70 + \$25.00 = \$30.70
Guest consumables + card fees + reserve	\$8.00 + \$23.82 + \$23.40 = \$55.22
Annual NPS authorization allocated to 16 runs	\$650 / 16 = \$40.63 per run (rounded). [10]
Contribution before shared overhead / acquisition	\$433.46 per completed departure (unrounded basis).

The current GGNRA guided-services schedule lists \$350 annual application + \$300 per guide for a placard. Confirm the exact authorization and insurance conditions with NPS; allow its published processing time. Additional garden/group permissions and fees may apply. The \$25 garden figure is an unverified allowance, not a quoted rate. [4,10]

C is a conditional pilot, not revenue added to the existing full A/B model. A second guide is needed for simultaneous operation. If the owner leads C instead, remove conflicting A/B departures and their revenue. Fewer than 16 C runs increase authorization cost per completed outing.

MEASURE THE PILOT

Track inquiries, paid guests, costs, guide hours and sales source. Record C weather cancellations separately. Use the pilot to settle the proposed four-guest minimum and refund policy.

13

The business plan forward

Positioning: a contemporary SF city tour with AI, neighborhoods, sports and practical local travel skills.

Stage	Work and release evidence
Before any paid tour	Confirm exact meeting/finish points, route timing, accessible alternatives and restrooms. Arrange insurance, business registration and location permissions. Set capacity, cancellations, weather terms and under-18 procedures. [10,23,24]
Days 1-14 after essentials	Rehearse A and B at the actual departure times on a weekday and weekend. Run a small pilot and debrief every outing. Prepare one short story card per stop and pass each guide's observed assessment.
Days 15-30	Open limited A/B dates only after checkout and operating terms work. Test Wharf sign conversations, a hotel/concierge information sheet and direct online bookings. Record acquisition cost and hours spent selling.
Days 31-60	Compare guest feedback with actual pace and margins. Change weak stops, refine check-in/return logistics and train backup coverage. Expand only the departure slots that show demand.
Days 61-90	Review cash, owner hours and repeatable bookings. Pilot C on selected clear days, prioritizing September/October opportunities when appropriate. Do not sell a daily sunny-beach promise.

CUSTOMER AND SALES APPROACH

Start with visitors who want to get beyond the Wharf and understand contemporary San Francisco. Lead with the neighborhood experience and local confidence; AI expertise is not required. For conference visitors, make the company-exterior scope explicit. For sports fans, show the real game schedule and separate admission.

Suggested street introduction: “Want to see the San Francisco people are building now? We explore on foot and by Muni, and show you how to keep enjoying the city like a local. Morning or afternoon?” Let the guest decide; keep the pedestrian path open.

WEBSITE RELEASE

The review website exists, but bookings remain disabled. Connect and verify aisftour.com, publish contact/meeting/cancellation information, configure Stripe and test checkout, confirmations, capacity and refunds. Release the public site before using the street QR. On September 8, 2026, aisftour.com did not resolve in a DNS check.

14

Put the guide beside a clear sign.

Final advertisement artwork is supplied in two formats; placement and website readiness remain operating tasks.

Supplied format	Production instruction
18 x 24-inch portable sign	Use the 18 x 24 trim size for a compatible outdoor A-frame; print two panels for two-sided use. It is the compact option for the existing bike/trailer concept.
24 x 72-inch banner	Use the 24 x 72 trim size for an approved, sheltered freestanding display. Ask the supplier for an outdoor-rated system; do not assume an indoor retractable stand suits Wharf wind.
Both PDFs	Vector type and QR, embedded fonts, 0.125-inch bleed each edge and a defined TrimBox. Print at 100% of the trim size. Preserve the white QR quiet zone; never cover it with a logo.
Color and material	Ink #101a20, acid lime #d5ff58, cool white #f4f6f2. Use a matte finish; request a physical color proof and printer-specific color conversion. Bright lime varies by stock and process.
QR destination	https://aisftour.com - intended public website. Verify DNS, HTTPS, anonymous access, tour dates and the booking path before putting the advertisement outside.

STREET SETUP AND STORAGE

Agree the exact standing/display location with its property owner or responsible authority. The city's published A-frame order limits placement to business frontage and requires pedestrian clearances; it is not blanket permission for a roaming guide to place a sign anywhere at the Wharf. Confirm Port or park jurisdiction where relevant. [23,24]

Keep the display attended and out of curb ramps, queues and doorways. Use manufacturer-approved ballast and remove it when conditions exceed the equipment guidance or the sign moves. Arrange secure storage or collection before guiding; do not take a large sign upright on the bicycle.

PRODUCTION ALLOWANCE

The existing compact sign kit carries a **\$750 planning allowance**: panels \$120, A-frame \$180, cargo trailer \$350, sleeve/straps \$60 and ballast \$40. This is not a supplier quote. Tall-banner hardware/printing is an optional separate purchase and is not included in that allowance.

Release check: scan a full-size printed sample with more than one phone; open the destination without a staff login; confirm correct prices, meeting details and checkout. The final artwork removes the earlier DESIGN PROOF wording. It does not establish site access or authorize sidewalk placement.

Financial source: AI-SF-Tour-Budget.xlsx, updated September 9, 2026 with the SF minimum wage floor. Training times, C pricing, the \$25 garden allowance, the C decision deadline and pilot targets are planning proposals. Garden ticket prices depend on the visit; a reliable current general-admission price was not exposed in the official pages read.

16

Addresses | Branches A + B

All locations are in San Francisco. Tap an underlined address to open a map search. Checked September 14, 2026.

Stop	Address / navigation reference	Guide use
B / OpenAI	<u>1455 3rd Street</u>	Published company address, CA 94158. Exterior interpretation only; choose the standing point in rehearsal. [25]
B / Chase Center	<u>1 Warriors Way</u>	Warriors and Valkyries story. Check the official home-game schedule and event barriers. [15a,15b,28]
B / RH + coffee	<u>590 20th Street</u>	The Palm Court / historic Bethlehem Steel building. Coffee is paid by the guest; confirm service first. [14a]
B / Oracle Park	<u>24 Willie Mays Plaza</u>	Exterior finish reference. Show the Giants schedule; tickets are separate. [15,29]
A / Chinatown-Rose Pak	<u>Stockton Street and Washington Street</u>	Southwest corner station entrance. Teach train direction without gathering on the stairs. [20]
A / Moscone West	<u>800 Howard Street</u>	Fourth/Howard. Building reference for the Jobs/iPhone story; no convention entry promised. [21,31]
A / Ferry Building	<u>1 Ferry Building</u>	Embarcadero at Market. Finish and onward-transit reference; agree on an exact public standing point. [30]

AN ADDRESS IS NOT A MEETING PERMISSION

Published addresses identify places. They do not establish access to a lobby, forecourt, cafe, stadium or station assembly area. Keep doors, boarding areas and pedestrian paths clear.

The Fisherman's Wharf starting pin is still to be selected and approved. Do not send guests to an invented corner or use a company's office as the tour check-in point.

17

More addresses | Dates matter

Company occupancy can change. Branch C remains a separate sunny-day proposal.

Stop	Address / reference	Status and operating note
A / Anthropic	500 Howard Street 505 Howard Street 300 Howard Street 342 Howard Street	A February 2, 2026 landlord announcement identified 500/505 as occupied then and a new lease at 300/342. Verify current occupancy before naming a headquarters. Use a public Howard Street story point. [12]
Anthropic / mail only	548 Market Street PMB 90375 San Francisco, CA 94104-5401 United States	Published mailing address. PMB means private mailbox; this does not verify an operating office or visitor stop. Keep Branch A on the Howard Street corridor. [37,38]
B / YC / Pier 70	YC: Pier 70 campus Public Building 12: 1070 Maryland Street	YC confirms a Pier 70 campus. Building 12 is a separately verified public navigation reference, not a claimed YC entrance. Keep the campus story exterior. [13,35]
C / Outerlands	4001 Judah Street	Guest-paid coffee. Verify quick service; eight guests plus a guide exceed the published seated-party limit of eight. [14b]
C / Tea Garden	75 Hagiwara Tea Garden Drive	Japanese Tea Garden, Golden Gate Park. Admission and tea are guest purchases; confirm group access. [4,32]
C / Japantown	Post Street and Buchanan Street	Peace Plaza reference. September 2026 works affect access; use posted detours and rehearse an accessible finish. [33,34]

Other C route anchors: Judah/La Playa for Ocean Beach and Haight/Ashbury for the neighborhood story. These are planning intersections, not approved gathering points. South Bay addresses and private homes are not tour stops.

Update before every departure: actual entrance, sidewalk works, elevator/service alerts, restroom access and crowding. Record the observation date and a fallback. Do not treat a map result as permission.

18

OpenAI | The story on the street

Branch B / 1455 3rd Street / a five-minute story and conversation, with pauses. Original guide script.

OPENING LINE

"Builders, ballers and the Bay meet here: an arena, a working neighborhood and a company whose software people use far beyond San Francisco. Let's pause and look at how those worlds share one place."

"OpenAI publishes 1455 3rd Street as its company address. We are visiting the neighborhood from the outside. Our tour does not include an office visit, and we are not speaking on the company's behalf." [25]

"On November 30, 2022, OpenAI introduced ChatGPT as a research preview. Its conversational format let people ask a question and follow up. Think about the change in that interface: instead of first learning a menu of commands, you can begin by describing what you want." [27]

"In his May 17, 2026 SFGATE report, Thomas Smith describes an invited visit, an unmarked exterior and carefully staged interiors. That is one journalist's account, not access offered on our tour. What would you want an AI company to explain to the public?" [26]

"Now bring that question back to your own trip. An AI tool can help draft a plan, but a fluent answer still needs checking. OpenAI's original launch notes explicitly acknowledged plausible-sounding errors. We will practice that distinction using a harmless travel question, then check a real source." [27]

"Which decision would you comfortably hand to software, and which would you want a person to make? There is room for different answers. A useful city tour should leave you with a better question as well as a good photograph."

TRANSITION TOWARD THE BALLPARK

"Let's take that conversation toward Oracle Park. At our next stop, we will use the official Giants schedule to check what is actually happening today. That is local know-how you can use after the tour ends."

Delivery: Ask for two brief guest responses. Attribute the reported visit to Smith; do not present his observations as your own. Avoid guesses about staff, private interiors or current model capabilities.

19

OpenAI | Run the 25-minute stop

The story and exercise fit the existing 4:15-4:40 PM route allowance. Rehearse with an actual group.

Time	Action and purpose
4:15-4:20	Approach from Chase Center, cross legally, count the group and choose a clear public standing point. Check street numbers.
4:20-4:25	Deliver the script on page 18, including two short guest responses. State the exterior-only scope.
4:25-4:31	Optional phone exercise: ask for a short explanation of how to choose a Muni route. Then open SFMTA's actual route page and check direction and alerts. Use a guide phone or read a prepared example if needed.
4:31-4:36	Discuss which parts were useful, which needed evidence and what was missing. A correct answer can still be incomplete; do not stage a deliberately false result.
4:36-4:40	Questions, headcount and departure toward Oracle Park. Preserve the route's remaining buffer.

A PHONE EXERCISE EVERYONE CAN JOIN

Suggested prompt: "Explain how a visitor can check the direction of a San Francisco Muni train. List what I should verify with SFMTA before boarding." Guests need not install an app, create an account or reveal personal information. Compare the answer with the official source, not with the guide's memory. [5,16]

IF TIME, ACCESS OR CONNECTIVITY CHANGES

Use the opening, published address, 2022 launch date and one guest question as a 90-second version. Move the phone exercise to the closing stop if the sidewalk is busy. If the frontage cannot be used, deliver the story from the prechecked alternative and explain the change.

Guide assessment: Correctly name the address; distinguish company publication, dated reporting and personal observation; explain why a useful answer may need verification; and leave on time. No claimed tour access, endorsement, special staff contact or guaranteed celebrity sighting.

20

OpenAI | Two photo references

Documentary excerpts from the supplied article, paired with wayfinding and interpretation notes.

Campus exterior, May 27, 2025.

Photo: Smith Collection/Gado, via SFGATE.

1515 Third Street, August 20, 2024.

Photo: Smith Collection/Gado, via SFGATE.

1455 IS THE PUBLISHED COMPANY ADDRESS

The dated 1515 photograph is a separate campus reference. Do not label it as 1455, infer a current visitor entrance from it, or lead the group into an office to match the picture. [25,26]

USE THE IMAGES TO TRAIN OBSERVATION

Before speaking: find the street number in the field and compare it with the address card. Establish where the group may stand independently of the picture. A historic photograph does not establish current occupancy or access.

Prompt: "What can you observe directly, and what would you need another source to establish?" Use the answer to introduce the same evidence-checking habit practiced with AI outputs.

Source: Thomas Smith, [I went inside OpenAI's secretive San Francisco headquarters](#), SFGATE, May 17, 2026. Photos retain their original dates and credit; they are not photographs taken by AI SF Tour.

Photo rights: These two excerpts are included for the requested guide-training discussion. Attribution does not establish a marketing or republication license. Obtain the relevant rights before reusing them in advertising, on the public website or in a publicly distributed edition. [36]

HOW TO USE THIS EDITION

Pages 16-21 add the address directory, OpenAI script, guide exercise and two photo references. Branch B names 1455 3rd Street. Anthropic's 548 Market Street, PMB 90375 address is recorded as mail only on page 17. Exact standing points, office occupancy and permissions still require field work.

The earlier financial tables retain the full-schedule \$195 model. Use the separate Full Business Plan, Six-Week Pilot Plan and 15 Steps to Cashflow for the later proposed \$100 pilot, assumptions and goals. This guide update does not activate a new price or booking.

Use the September 14 SF and Wharf Fee Verification memo for the later tax/permission review. No tour tickets are on sale in this edition. Coffee and Muni fares remain guest-paid; Branch C remains conditional; South Bay places remain stories only.

OpenAI + Anthropic | Shared roots

Spoken script, part 1 of 2 / about five minutes total, plus brief guest responses. Facts checked September 14, 2026.

Guide cue: Welcome all levels of familiarity. After the opening question, allow a show of hands; guests do not need a phone or account.

Look around San Francisco and you can see the physical side of AI: office buildings, sidewalks, coffee shops and people going to work. Two of the companies in this story are OpenAI and Anthropic. Their best-known assistants are ChatGPT and Claude. Who here has tried either one?

OpenAI introduced itself in 2015. On November 30, 2022, it released ChatGPT as a research preview: a conversational interface where you could ask a question and follow up. That is an important change to notice. You could begin by describing what you wanted in ordinary language. [39,27]

Anthropic was founded in 2021 by a team that had worked at OpenAI, including siblings Dario and Daniela Amodei. It introduced Claude in March 2023. These companies have connected roots, even as they have developed their own products and approaches. [40,41,42]

Both offer assistants for tasks such as writing, explaining ideas and working with code. A useful comparison goes beyond which answer sounds more polished. How should the assistant behave when instructions are unclear, when it lacks evidence, or when a request could hurt someone? [27,42]

OpenAI publishes a Model Spec describing intended model behavior. It explains how the assistant should handle competing instructions and balance helping people with preventing harm. Think of it as a public statement of how the company wants its assistant to act. [43]

Anthropic publishes a constitution for Claude: guidance about the values and judgment it wants the model to develop through training. It also researches interpretability, which asks how these systems work internally. Both companies describe safety goals. Those published intentions give us something to examine; they do not prove that every answer meets the goal. [44,45,43]

Continue on page 23. Company publications establish dates and stated intentions; they are not independent comparisons of product performance.

OpenAI + Anthropic | Try the question

Spoken script, part 2 of 2 / continue directly from page 22.

Let us bring that comparison back to your visit. Imagine asking each assistant the same thing: "I am visiting San Francisco and want to use Muni. Explain how to check which direction to travel, and show me the official source I should consult before boarding."

What would make one answer more useful? Maybe it gives clear steps. Maybe it asks where you are starting. Maybe it identifies something that could change today. We can compare the answers, then open the actual SFMTA information and see whether the advice holds up.

You might prefer one explanation over the other. Keep track of what you preferred: clarity, a useful question, a source that supports the claim, or an honest statement of uncertainty. That is a more useful observation than simply announcing a winning company. A single prompt is a small demonstration, and a different task or version may produce a different result.

Now the bigger question: what would you want these companies to get right as AI becomes part of daily life? Helping people learn? Making work easier? Protecting private information? Giving people ways to question an automated decision? Pick one, and tell us why it matters to you.

[Pause for two short responses.]

That is why these companies belong on a San Francisco tour. The software reaches far beyond the city, but we can stand in the neighborhoods where part of that work happens and ask what it means for the people who live here. Builders, ballers and the Bay. And today, you get to bring your own questions.

AN OPTIONAL DEMONSTRATION

If the group wants to try the prompt, use the existing six-minute phone exercise slot. Apply the same prompt and comparable tools to both assistants; show the actual outputs and verify the sources. The spoken script alone requires no app access.

Departure: Thank guests for their views, count the group and continue the route. Allow disagreement without turning the stop into a sales pitch for either company.

Comparison | Delivery + sources

Use the script once per tour. Keep route timing and the address distinctions in the field directory.

Branch A: Use within the existing 10:50-11:10 AM Anthropic corridor stop. **Branch B:** Use in place of the page 18 story in the 4:20-4:25 PM slot; the optional demonstration replaces the existing 4:25-4:31 PM exercise. Rehearse the delivery and shorten guest discussion to preserve the scheduled departure.

Addresses: OpenAI publishes 1455 3rd Street. Anthropic publishes 548 Market Street, PMB 90375 as a mailing address; it is not a verified visitor office. Use the dated Howard Street references on page 17 for Branch A. Both tours remain exterior visits. [25,37,38,12]

Fair comparison: Record the date, visible model/version, prompt and enabled tools. Check actual source support and useful questions. Label a prepared example with its date; never invent an output. Describe observations from this task without claiming a universal winner, fixed personality or superior safety.

Existing references: ChatGPT launch [27] on page 21; SFMTA route information [5,16] on page 15. The illustrative travel prompt is original and makes no claim about current fares, service or app features.

Edition addition: Pages 22-24 add this comparison. Financial assumptions, prices and booking status are unchanged. Review dated company claims before each new training edition.

25

Apple Union Square | Future stop

Future Branch A option / recorded September 14, 2026 / route rehearsal and store coordination pending.

FROM THE IPHONE STORY TO APPLE INTELLIGENCE

Candidate location: Apple Union Square, a retail store at 300 Post Street, San Francisco, CA 94108. This is a future itinerary option, not a confirmed inclusion in the current Branch A ticket. [46]

Navigation: [300 Post Street map](#) / [Apple store hours and sessions](#)

WHY IT FITS + HOW TO TEST IT

Connect the existing Jobs/iPhone story at Moscone with AI in everyday devices and apps. For a future Branch A variant, test a stop via the T line's Union Square/Market Street Station, then onward travel to Moscone. Rehearse station access, walking and re-entry before changing the route. [21,48]

Pair Apple with Nintendo at 331 Powell Street and World at 281 Geary Street. Pages 29-31 propose a combined 20-minute exterior cluster plus measured station and onward travel, replacing time within the 210-minute tour. Apple lists 10 AM opening on most dates shown and 11 AM on Sunday, with exceptions; check the exact date. [46,59,60]

SHORT GUIDE SCRIPT / ABOUT ONE MINUTE

"Apple adds another angle to our AI story: how these tools become part of the devices and apps people already use. Apple Intelligence includes features for writing, photos and Siri. The available features depend on the device, software, language and region, so we check what actually works on the day. [47]"

"At Moscone, we talk about the iPhone changing how people interact with a computer. Here, we can ask what changes when you describe a task in words. Would you prefer to open a separate AI app, or have that help available inside the task you are already doing? What would you want to control?"

BEFORE OFFERING AN INDOOR EXPERIENCE

Confirm group access, session availability and duration directly with the store before promising a guided indoor stop. Today at Apple sessions are separate store events; a public listing does not reserve places for our group. Any demo should use prepared, non-personal content and a verified supported device. [46,47]

46. [Apple Union Square / address, hours and sessions](#)

47. [Apple Intelligence / features and availability](#)

48. [SFMTA / Union Square-Market Street Station, T line](#)

Status: Future Apple/Nintendo/World cluster recorded on pages 29-31. No new ticket inclusion, company affiliation or unreleased feature is promised.

26

NVIDIA + AMD | Where to tell it

Location research checked September 14, 2026. A reported lease is distinct from verified occupancy or visitor access.

Place	Address / evidence	Tour decision
NVIDIA / SF	1090 Dr. Maya Angelou Lane San Francisco, CA Mission Rock, Building B	Rumored to be true / unconfirmed. SF Standard and CoStar reported an office lease on November 20, 2025. Current occupancy and visitor access have not been independently verified. [49,50]
NVIDIA / corporate	2788 San Tomas Expressway Santa Clara, CA 95051	Official corporate address. South Bay story reference; outside Branches A, B and C. The public location list reviewed does not name San Francisco. [51]
AMD / corporate	2485 Augustine Drive Santa Clara, CA 95054	Official corporate location. South Bay story reference; outside Branches A, B and C. No San Francisco office entry was found in the directory reviewed; this does not prove none exists. [52]
AMD / SF event	800 Howard Street San Francisco, CA Moscone West	Moscone lists AMD Advancing AI for July 22-23, 2026 at Moscone West. Use as a dated event story at the existing Branch A stop, not as an AMD office or an event happening today. [53,31]

RECOMMENDED ROUTE FIT

Branch B candidate: Rehearse OpenAI → Mission Rock Building B → Oracle Park, with a short exterior NVIDIA story between the existing OpenAI and ballpark stops. Measure walking, crossings and a clear standing point before adding a timed stop. Keep the 5:30 PM finish; use the chip story at an existing stop if the detour does not fit.

Before promising the location: confirm current tenancy and access arrangements with the building or company. A reported office lease provides no public tour, lobby access, chip display, factory visit or data-center access. Company and landlord spokespeople declined comment in the 2025 reporting. [49,50]

Already in this guide? Yes: page 8 contained a brief AMD/NVIDIA hardware prompt. Pages 26-28 now add the address research, a full spoken script and delivery notes. The NVIDIA exterior stop remains a proposal.

27

NVIDIA + AMD | The chip story

Original spoken script / about three minutes, plus one short guest response. Use once on a departure.

When you ask an AI assistant a question, the words on your screen are the visible part of a much larger computing job. NVIDIA and AMD help us tell the hardware side of that story.

A GPU is a graphics processing unit. GPUs can perform many calculations in parallel, which makes them useful for the large amounts of mathematical work in modern AI. Imagine a team dividing up suitable parts of a job. That is a rough analogy for parallel work, not a claim that every task becomes faster. [58]

There are two terms worth taking home. Training is the process of adjusting a model using examples and feedback. Inference is using a trained model to produce an output from new input. Both require computing, even though they do different jobs. [57]

NVIDIA pairs its GPUs with CUDA, a software platform that helps developers put the hardware to work. AMD offers Instinct GPUs and ROCm, its software stack for accelerated computing. The practical choice involves the hardware, the software and the work someone needs to do. We are discussing their roles, rather than awarding a permanent winner. [54,55,56]

Here is the local connection. The NVIDIA location at 1090 Dr. Maya Angelou Lane, Mission Rock, is rumored to be true. Reporters described an office lease in November 2025; we have not confirmed current occupancy. The published corporate addresses are AMD at 2485 Augustine Drive and NVIDIA at 2788 San Tomas Expressway, both in Santa Clara. We discuss those South Bay campuses as stories on this San Francisco tour; we do not visit them. [49,50,51,52]

AMD still has a place in our city story. Moscone listed its Advancing AI event for July 22 and 23, 2026 at Moscone West. That gives us a dated local connection to discuss at a stop already on Branch A. A past conference listing does not make the venue an AMD office. [53]

Now think about the next answer you receive from an AI tool. You might ask whether it is useful and accurate. You can also ask what hardware, software and people made it possible. Faster computing can help a system do more work; we still need to check whether the answer deserves our trust.

ASK THE GROUP

"Which part surprised you most: the computing behind a chat response, the importance of software tools, or the connection between city offices and a much wider hardware industry?"

Location cue: The script works at an existing stop. Keep the "rumored to be true" label until occupancy is verified. Say "this building" only when the guide has checked the frontage and the group is actually at the proposed Mission Rock reference.

Chip story | Delivery + sources

Distinguish documented addresses, dated reporting, the guide's route proposal and field observations.

Timing: Use the script within an existing interpretation allowance on A or B. If the NVIDIA exterior stop is adopted later, relocate this story there rather than repeat it. Rehearse the full route before changing the published schedule.

Short fallback: "NVIDIA and AMD make hardware and software used for AI computing. GPUs can perform many calculations in parallel. NVIDIA offers CUDA; AMD offers Instinct GPUs and ROCm. The office story is local, while the work of building and running AI extends far beyond one building. More computing does not remove the need to check an answer." [54-58]

South Bay fallback: If the Mission Rock location is not used, tell the chip story at an existing San Francisco stop. Name AMD at **2485 Augustine Drive, Santa Clara**, and NVIDIA at **2788 San Tomas Expressway, Santa Clara**. These are geographic references, not additional tour destinations. [51,52]

Accuracy: Label the Mission Rock NVIDIA location "rumored to be true" and cite the November 2025 lease reports. Current occupancy remains unverified. Do not infer staff numbers, office use, a lab, exclusive chip suppliers or where an AI request is processed from this address.

SOURCES FOR ADDRESSES AND EXPLANATION

49. [SF Standard / NVIDIA Mission Rock lease, November 20, 2025](#)

50. [CoStar / NVIDIA lease and scheduled commencement, November 20, 2025](#)

51. [NVIDIA / corporate address and regional locations](#)

52. [AMD / official corporate location directory](#)

53. [Moscone / AMD Advancing AI, July 22-23, 2026 event listing](#)

54. [NVIDIA / CUDA software platform](#)

55. [AMD / Instinct GPUs and ROCm software](#)

56. [AMD / What is ROCm?](#)

57. [NVIDIA / training and inference explained](#)

58. [NVIDIA / parallel processing and GPUs for AI](#)

Evidence note: Corporate directories establish published locations but can lag new leases. Real-estate reporting supports the Mission Rock lease claim; current move-in and visitor access remain unverified. Vendor technical sources support the basic explanation, not a performance ranking.

Edition addition: Pages 26-28 add AMD/NVIDIA research and script. Apple on page 25 is paired with Nintendo and World in the future Branch A option on pages 29-31. South Bay campuses remain stories only.

29

Apple + Nintendo + World

Future Branch A variant / researched September 14, 2026 / pair these three stops in one Union Square visit.

Stop / order	Address	Story / practical note
1 / Apple	300 Post Street	Devices and everyday AI. Use the short Apple script on page 25. Check date-specific hours. [46,47]
2 / Nintendo	331 Powell Street	Play, characters and interactive design. Official hours: Mon-Sat 10 AM-8 PM; Sun 11 AM-6 PM. [59]
3 / World	281 Geary Street	Human verification, biometrics and the sneaker story. Official hours: Mon-Sat 10 AM-7 PM; Sun noon-6 PM. [60]

ROUTE REHEARSAL / ONE COMBINED STOP ALLOWANCE

Test the sequence from T Union Square/Market Street Station: Apple on Post, Nintendo at Powell/Geary, then World on Geary, followed by onward travel to Moscone. This is a proposed walk sequence, not a measured route. [46,48,59,60]

Planning allowance: 20 minutes within the cluster: Apple 4 + Nintendo 4 + World 5 + local walks/crossings 7. Station access, transit waiting and onward travel are additional and must be timed in the field. Identify what this replaces within Branch A's existing 210 minutes before adopting it; keep the noon finish and comfort break.

Sunday: World opens at noon, when Branch A ends. Use the exterior story during the morning tour; any indoor visit is a separate guest choice afterward. At other times, doors, queues and group policies still need checking. No indoor admission, demo, event place or purchase is included. [59,60]

NINTENDO GUIDE SCRIPT / ABOUT ONE MINUTE

"Nintendo gives us a different way to talk about technology: through play. This is a retail store for games, hardware and characters people recognize, with displays and game demos shown on the official store page. [59] Think about a game that taught you how to play without a long manual. What did the controls, images or feedback make clear?"

"That is our bridge to the rest of this block: Apple gives us everyday interfaces, Nintendo gives us interactive worlds, and World asks how a person proves they are human online. This is a comparison about design and participation; the store itself does not establish any Nintendo AI product or partnership."

Use with: Apple script on page 25, World script on page 30 and delivery/source notes on page 31. These remain future route options, with no new ticket inclusion.

30

World | Humans, Orbs + sneakers

Original spoken script / about three minutes, plus a short guest response / 281 Geary Street exterior.

This storefront brings us to a different question about AI: when software can imitate a person online, how can a service check that a real, distinct human is taking part? World describes World ID as a way to make that check. Its stated ambition is a global human network. [61]

Sam Altman is part of this story. He co-founded Tools for Humanity with Alex Blania and Max Novendstern in 2019. Tools for Humanity develops technology for World; World Foundation stewards the protocol. World ID is the human-verification credential. Worldcoin, or WLD, is a separate token within the wider project. [61]

The silver device is called an Orb. According to World, it captures images of a person's face and eyes, encrypts those images and sends them to that person's phone. It also generates codes used to check whether the person has already registered. That is biometric processing, even though the purpose described here is checking uniqueness. [62]

World says it splits the verification code into cryptographic pieces and compares those pieces across independent computers, aiming to avoid a central database of readable biometric records. That is the company's description of its design. Our tour has not audited the system. A useful discussion separates the design claim from questions about consent, security and what happens if something goes wrong. [63]

Now for the San Francisco twist: sneakers. On April 23, 2026, Gazetteer SF reporters Cydney Hayes and Joshua Bote described a World and Future Basics sneaker collaboration sold for \$160 plus tax, with Orb verification required to buy. World also lists the Cyto XLiftoff collaboration as a limited drop for verified humans. That is a dated retail story; we have not confirmed today's stock, price or purchase conditions. [64,65]

The interesting question is what happens when proving you are human becomes part of access to ordinary things, including shopping. Could this make limited releases fairer for people competing with bots? What choices should remain for someone who does not want biometric verification? We can explore those questions here without signing up, buying anything or using the Orb.

ASK THE GROUP

"What would you want to know before choosing biometric verification, and what alternative should exist for people who decline?"

Delivery cue: Use this once, within the five-minute World allowance. Describe the Orb even if it is not visible from the sidewalk; do not imply a device demonstration is guaranteed.

Union Square | Delivery + sources

Keep the group together and distinguish company descriptions, dated reporting and the tour's own discussion prompts.

Observation-only tour segment: No guest needs to install an app, scan their face or eyes, create an account, claim a token or purchase anything to participate. The guide does not arrange biometric enrollment or handle a guest's credentials. Any independent follow-up is outside the tour and subject to the provider's terms.

Age and access: Our tour accepts ages 16+; World verification requires 18+ in the United States, including when a parent accompanies a younger visitor. Keep the shared story outside and suitable for everyone. Recheck the rule and site access before any proposed indoor group visit. [66]

Language: Explain World as a biometric proof-of-human project. "Cataloging humanity" can introduce a guest's concern, but it is not a verified technical description of a database containing everyone's identity. Attribute the privacy architecture to World and invite questions about consent and alternatives. [61-63]

Retail facts: Attribute the \$160-plus-tax and verification condition to the April 23 Gazetteer SF report. Recheck current price, availability and terms before directing a shopper. Any merchandise is a separate guest purchase; that historical retail tax statement does not establish a tax on the tour ticket. [64,65]

Guide preparation: Rehearse crossings and standing points, check each store's dated hours and confirm group access before offering entry. Nintendo uses Warp Pipe Pass reservations for certain events; an ordinary store visit does not guarantee those places. Keep shop doors clear and avoid filming people undergoing verification. [59,60]

SOURCES / CHECKED SEPTEMBER 14, 2026

59. [Nintendo San Francisco / official address, hours and event reservations](#)

60. [World Flagships / San Francisco address and hours](#)

61. [World / purpose, Tools for Humanity founders and Foundation](#)

62. [World / how the Orb processes images and verification codes](#)

63. [World / stated privacy design and cryptographic shares](#)

64. [Gazetteer SF / \\$160 sneaker report, April 23, 2026](#)

65. [World / Future Basics Cyto XLiftoff limited sneaker collaboration](#)

66. [World Help Center / minimum verification age, August 27, 2026](#)

Edition record: Pages 29-31 pair Nintendo and World with the future Apple stop on page 25. Pages 26-28 retain the AMD/NVIDIA script and South Bay addresses. This addition changes the training materials; route adoption still depends on rehearsal.
